BUILD VALUE - BUILD DREAM

WET RICE CIVILIZATION IN VIETNAM

For thousands of years, rice has been closely associated with people, providing satiety and adding beauty to Vietnamese cultural and spiritual life. As a staple cereal crop, rice is the primary food source for Vietnamese and other Asian communities. Rice grains play an essential role in family meals and social gatherings.

In the past, rice plants and grains solely served the purpose of providing sustenance. However, in present times, they have transformed into valuable commodities that enhance farmers' livelihoods. Thanks to reasonable policies, positive changes have been observed in rice production, accompanied by good signals from the export market. These developments have provided a sense of security to farmers and strengthened their dedication to the rice production profession.

INTRODUCTION

Established in August 2018, SAI GON PEARL (SGP) has become a leading real estate company. In 2022, SGP entered the food production business, with its strength lying in rice - an essential consumer product for Vietnamese and Asians in general. Vietnam is currently one of the world's leading rice-exporting countries. However, the strategic location of SGP's factory in Kien Giang, one of the Mekong Delta's beautiful and famous rice-growing areas, provides the best advantage. Furthermore, the factory is conveniently located near the provinces of An Giang, Can Tho, Bac Lieu, and Ca Mau, making it a convenient hub for transport and trade food business.

**SAI GON PEARL RICE - REPUTABLE
AGRICULTURAL IMPORT - EXPORT UNIT**

Therefore, building solid customer trust is critical, which can be achieved by improving product quality, competitive pricing, and brand reputation. All SGP products undergo strict quality control measures, from the procurement of raw materials to the production process, to ensure that consumers receive high-quality products. The rice production process utilizes the latest technology and modern machinery, including the rice drying system, paddy husker (rice peeling machine), rice polishing machine, ball plunging machine, and separating machine. In addition, the products are carefully preserved in good packaging or silos to ensure the quality and quantity of all orders, whether in bulk or otherwise.

Saigon Pearl Rice is committed not to using mixing methods and odorants. Instead, our products are processed and processed on modern technological lines to ensure customers with delicious natural rice grains.

VISION

Become the leading enterprise in Vietnam in supplying and exporting agricultural products. Always try to improve the quality and value of Vietnam grains of rice to the international market.

MISSION

Providing high quality rice at a competitive price for long-term cooperation with rice importers all over the world, focus on rice value in the international market.

STRENGTHS

At Sai Gon Pearl, we supply a variety of rice varieties to meet the strict requirements of international consumers best, bringing Vietnamese flavor to all regions.

SGP has established a vast network of clients globally and has built long-term partnerships with them.

Sai Gon Pearl has a team of experienced and professional staff.

SGP can have extensive production and supply capacity, meet the needs of large markets, and ensure the ability to supply products in sufficient quantity and on time.

Sai Gon Pearl manages its supply chain closely to ensure that rice is delivered to customers with the right quality, quantity, and time.

Sai Gon Pearl Rice focuses on selecting high-quality rice from the best rice farms in Vietnam, ensuring that the rice production and packaging process is strictly followed to ensure the quality of the final product.

WHY SHOULD YOU CHOOSE US?

06

Producing and exporting high-quality rice products ensures to meet the strict demands of the most demanding markets.

05

We have in-depth experience with rice export in the international market, ensuring a suitable rice supply according to everyone's requirements.

01

SGP has a certificate of eligibility for the rice export business, including quality certification, food safety, and environmental protection.

02

Using modern production machinery and rice screening lines, each grain of rice at SGP ensures the essence of each nature.

04

Strictly implement rice purchasing with a strict process, do not mix and remove impurities, and bring each grain of natural, solid white rice.

03

Rice products meet the following criteria: No chemical residues, preservatives, odorants, or bleaching with other harmful substances.

“Vietnamese rice is increasingly asserting its position in the world market.”

SAI GON PEARL RICE

The launch of a rice production brand with the desire to bring the sweat and hard work of the people of my hometown to a new level has ignited a passion for getting large, round grains of rice to friends everywhere to enjoy, appreciate, and relax.

THE SWEETS AND THE BITTERS OF LIFE

As we accompany the farmer's growth journey more than anyone else, we understand the hardships that farmers go through after each crop.

Good seasons are rare, but the weight of each loss is felt throughout the field.

Traders often force prices down, bargaining hard and sometimes not even consuming the produce, even though farmers have already lowered their costs significantly.

Witnessing this, we have nurtured our dreams of becoming a buyer and directly distributing and exporting rice from rural areas to new markets. We aim to alleviate the worries of crop failures, capital losses, and the loss of a source of income that people have spent so many years building up.

Of course, when we entered the Vietnamese rice market in the first few years, we encountered countless unnamed obstacles. However, we always maintained close ties with the farmers and brought their high-quality rice yields to the market. We offered the best, most fragrant, and competitively-priced rice, and we were committed to not using any preservatives or chemicals.

Over a long operation, we have gradually established our position in Vietnamese and international markets. Saigon Pearl always values and appreciates those who have been with us from the beginning, through the difficult times, until we finally achieved success and recognition.

RICE MILLING PROCESS & QUALITY STANDARDS

Along with the goal of growth, providing enough output for domestic and export markets, Saigon Pearl focuses on investing in clean rice processing on modern lines, ensuring natural quality without using chemicals to preserve, create odor, and whiten to affect the health of consumers.

SAIGON PEARL

Creating a solid foundation for Vietnamese agricultural products!

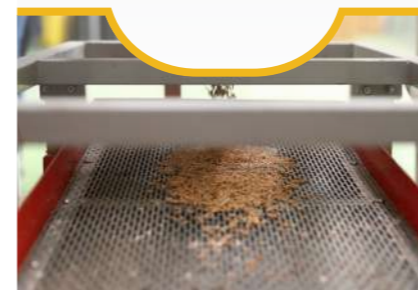

Paddy is harvested when it has reached the proper maturity. After harvesting, the paddy will be stored in paddy bags or immediately transported to the milling plant.

When fresh paddy arrives at the mill, it must undergo several pre-treatment steps to remove weeds or other impurities present in the paddy. This process may include drying the paddy, taking samples to check the paddy quality, and eliminating unsatisfactory grains.

At Saigon Pearl, the initial task is to obtain an accurate screening of the quality of the exported rice from receiving fresh paddy and then drying paddy to the exact moisture that we can store for a long time.

When we have an order, we will prepare the process, including husking, milling, polishing, and sorting. The finished product is stored in a Silo before proceeding to the final packaging stage.

Through the final quality inspection process, pack according to the package, transport to the container yard/bulk vessel and export to customers all over the world.

FACTORY INFRASTRUCTURE

SYSTEM OF MEANS OF TRANSPORTATION

SORTER SYSTEM 576 MT PER DAY

MILLER SYSTEM 1,200 MT PER DAY

FACTORY

Our rice mill is in Giong Rieng - Kien Giang province and is one of the most famous material areas of rice with the highest quality in Vietnam. This advantage facilitates us to procure the best kinds of paddy and cooperate with other domestic rice suppliers. We are also equipped with a modern production line from milling, polishing, and sorting to packing and are operated by experienced quality control staff to reach the highest productivity.
